

## Your All-in-One POTS Replacement Solution

Get White-Glove Service Backed by Redundant LTE and Ethernet

### > Fire Panels

**POTS Line Replacement Solutions are shared communications services, like original PSTN lines.**

They may also be used for faxing, phone calls, and more. They do not touch the fire alarm system. Rather, they are installed in the telco room or demarcation point, also known as the minimum point of entry (MPOE) or "demarc".

Like original POTS lines, POTS replacement services receive analog audio input from the FACP. They deliver the same analog audio as output to the receiver at the monitoring station. The system is a simple replacement of the original PSTN or POTS line. It does not require any changes to the FACP panel nor to the alarm monitoring station. AirDial is NOT a Cellular Communicator or a Dial Capture Device.

#### AirDial Features Related to NFPA 72 Guidelines:

- Fully managed end-to-end MFVN solution for pathway reliability
- Standby power > 8 hours, can be extended to > 24 with optional accessory
- No reconfiguration of fire and security panel required
- Line seizure compliance
- Central Office compliance

**AirDial is Endorsed by the California Fire Marshall**
